Being a longtime friend of Richard and Monica Chapin my enthusiasm for them had been tempered of late due to my skepticism of their moonlight therapy.

I came for a visit in February and consciously decided to suspend my disbelief for the duration of my stay and see what happened. I have been afflicted for some 35 years by tinnitus. It is a high pitched screeching in my right ear that is continuous and leaves me no peace. Along with that I had a 90% hearing loss in that ear.

After my first encounter with focused moonlight, I retain my tinnitus but I can now hear almost normally out of my ear. Amazing! I can now hear in restaurants.

Beggars can't be choosy! Yes there is something to this moonlight therapy. I am a witness.
